Abstract—This manual provides an introduction to linear methods in regression.

1 STEINHART–HART EQUATION

1.1 The Steinhart–Hart equation is a model of the resistance of a thermistor at different temperatures. The equation is given by

$$\frac{1}{\tau} = w_1 + w_2 \ln(R) + w_3 [\ln(R)]^3 \quad (1.1)$$

Let

$$\mathbf{x}_1 = \begin{pmatrix} 1 \\ \ln(R_1) \\ [\ln(R_1)]^3 \end{pmatrix} \quad (1.2)$$

$$y_1 = \frac{1}{\tau_1} \quad (1.3)$$

$$\mathbf{w} = \begin{pmatrix} w_1 \\ w_2 \\ w_3 \end{pmatrix} \quad (1.4)$$

Show that

$$y_1 = \mathbf{x}_1^T \mathbf{w} \quad (1.5)$$

1.2 Suppose for $n > 3$

$$\mathbf{y} = \begin{pmatrix} y_1 \\ y_2 \\ \vdots \\ y_n \end{pmatrix}, \mathbf{X}^T = \begin{pmatrix} \mathbf{x}_1 & \mathbf{x}_2 & \vdots & \mathbf{x}_n \end{pmatrix}, \quad (1.6)$$

show that

$$\mathbf{y} = \mathbf{X}\mathbf{w} \quad (1.7)$$

1.3 For $\tau = 10^\circ\text{C} - 100^\circ\text{C}$, use the PT-100 resistance table in

https://github.com/gadepall/EE1390/blob/master/refs/5pt100sensoren_e.pdf?raw=true

to estimate \mathbf{w} using the relation

$$\hat{\mathbf{w}} = (\mathbf{X}^T \mathbf{X})^{-1} \mathbf{X}^T \mathbf{y} \quad (1.8)$$

1.4 Verify your result by finding the temperature when the resistance is 175.86Ω .

2 LEAST SQUARES

2.1 Find

$$\|\mathbf{y} - \mathbf{X}\mathbf{w}\|^2 \quad (2.1)$$

Solution:

$$\|\mathbf{y} - \mathbf{X}\mathbf{w}\|^2 = (\mathbf{y} - \mathbf{X}\mathbf{w})^T (\mathbf{y} - \mathbf{X}\mathbf{w}) \quad (2.2)$$

$$= \|\mathbf{y}\|^2 - \mathbf{w}^T \mathbf{X}^T \mathbf{y} \quad (2.3)$$

$$- \mathbf{y}^T \mathbf{A}\mathbf{w} + \mathbf{w}^T \mathbf{X}^T \mathbf{X}\mathbf{w} \quad (2.4)$$

2.2 Assuming 2×2 matrices and 2×1 vectors, show that

$$\frac{\partial}{\partial \mathbf{w}} \mathbf{w}^T \mathbf{X}^T \mathbf{y} = \frac{\partial}{\partial \mathbf{w}} \mathbf{y}^T \mathbf{X}\mathbf{w} = \mathbf{y}^T \mathbf{X} \quad (2.5)$$

2.3 Show that

$$\frac{\partial}{\partial \mathbf{w}} \mathbf{w}^T \mathbf{X}^T \mathbf{X}\mathbf{w} = 2\mathbf{w}^T (\mathbf{X}^T \mathbf{X}) \quad (2.6)$$

2.4 Show that

$$\hat{\mathbf{w}} = \min_{\mathbf{w}} \|\mathbf{y} - \mathbf{X}\mathbf{w}\|^2 \quad (2.7)$$

$$= (\mathbf{X}^T \mathbf{X})^{-1} \mathbf{X}^T \mathbf{y} \quad (2.8)$$

2.5 Using the Gram-Schmidt orthogonalization procedure, show that

$$\mathbf{X} = \mathbf{Q}\mathbf{R} \quad (2.9)$$

where $\mathbf{Q}^T \mathbf{Q} = \mathbf{I}$ and \mathbf{R} is upper triangular.

2.6 Show that

$$\hat{\mathbf{w}} = \mathbf{R}\mathbf{Q}^T \mathbf{y} \quad (2.10)$$

2.7 Find $\hat{\mathbf{y}}$

3 RIDGE REGRESSION

3.1 The ridge problem is defined as

$$\hat{\mathbf{w}} = \min_{\mathbf{w}} \|\mathbf{y} - \mathbf{X}\mathbf{w}\| \quad (3.1)$$

$$\text{s.t. } \|\mathbf{w}\|^2 \leq t \quad (3.2)$$

Using the Lagrangian, show that

$$\hat{\mathbf{w}} = (\mathbf{X}^T \mathbf{X} + \lambda \mathbf{I})^{-1} \mathbf{X}^T \mathbf{y} \quad (3.3)$$

4 THE LASSO

4.1 The Lasso is defined as

$$\hat{\mathbf{w}} = \min_{\mathbf{w}} \|\mathbf{y} - \mathbf{X}\mathbf{w}\| \quad (4.1)$$

$$\text{s.t. } \sum_i |w_i| \leq t \quad (4.2)$$

Obtain the corresponding Lagrangian.

4.2 Show that this is a quadratic programming problem and find a suitable algorithm.
