Abstract—This manual provides an introduction to SVM.

1 Reflection

1.1 Find the distance of $\mathbf{x}_1 = \begin{pmatrix} 2 \\ 1 \end{pmatrix}$ from the line

$$(3 \quad 4)\mathbf{x} + 5 = 0 \tag{1.1}$$

1.2 Show that the distance of the point \mathbf{x}_1 from the line

$$\mathbf{n}^T \mathbf{x} + c = 0, \quad ||\mathbf{n}|| = 1 \tag{1.2}$$

is

$$M = |\mathbf{n}^T \mathbf{x}_1 + c| \tag{1.3}$$

- 1.3 Find the reflection x_2 of x_1 .
- 1.4 Define

$$f(\mathbf{x}) = \mathbf{n}^T \mathbf{x} + c \tag{1.4}$$

1.5 Compute $f(\mathbf{x_1})$ and $f(\mathbf{x_2})$. Comment.

2 Optimization Problem

2.1 Suppose $(\mathbf{x_1}, y_1)$ and $(\mathbf{x_2}, y_2)$ where $y_1, y_2 \in \{1, -1\}$. If you want to find \mathbf{n}, c from the given dataset, how will formulate the equivalent op-

timization problem?

Solution: Consider the optimization problem

$$\max_{\mathbf{n},c} M \tag{2.1}$$

s.t
$$y_1\left(\mathbf{x}_1^T\mathbf{n} + c\right) \ge M$$
 (2.2)

$$y_2\left(\mathbf{x}_2^T\mathbf{n} + c\right) \ge M \tag{2.3}$$

$$\|\mathbf{n}\| = 1 \tag{2.4}$$

2.2 The *signum* function is defined as

$$\operatorname{sgn}(z) = \begin{cases} 1 & z > 0 \\ 0 & z = 0 \\ -1 & z < 0 \end{cases}$$
 (2.5)

Show that

$$\operatorname{sgn}(\mathbf{x}^T \mathbf{n} + c) = \operatorname{sgn}(\mathbf{x}^T \mathbf{w} + d) \tag{2.6}$$

where

$$\mathbf{w} = \frac{\mathbf{n}}{M}, d = \frac{c}{M}, M > 0 \tag{2.7}$$

2.3 Show that (2.1)-(2.4) can be reformulated as

$$\min_{\mathbf{w},d} \frac{1}{2} ||\mathbf{w}||^2 \tag{2.8}$$

s.t
$$y_i \left(\mathbf{x}_i^T \mathbf{w} + d \right) \ge 1$$
 (2.9)

Solution: From (2.7),

$$\mathbf{w} = \frac{\mathbf{n}}{M} \implies \|\mathbf{w}\| = \frac{\|\mathbf{n}\|}{M} \qquad (2.10)$$

$$\implies M = \frac{1}{\|\mathbf{w}\|} : \|n\| = 1 \tag{2.11}$$

Thus,

$$\max_{\mathbf{n},c} M = \max_{\mathbf{w},d} \frac{1}{||\mathbf{w}||} = \min_{\mathbf{w},d} ||\mathbf{w}||. \tag{2.12}$$

Also, (2.2)-(2.3) become

$$y_i \left(\mathbf{x}_i^T \mathbf{w} + d \right) \ge 1 \tag{2.13}$$
